

Noble Bay, laurel of triumph and honour.

Laurus nobilis

The common bay tree, full of symbolism, looks beautiful standing next to doors or entrances. It should be part of every celebration or farewell between family and friends.

Its evergreen leaves make the bay tree a symbol of eternal love.

Laurel is worn by some as an amulet to keep away negativism and evil.

To ensure each other's eternal love, you should break off a bay tree branch together and each keep half of it.

Both in Greece, in ancient Rome and still nowadays, laurel symbolises a winner.

Laurus nobilis makes an ideal pot plant.

Flemish bay tree
Flemish laurel tree

Charm of the Belgians

Topiary Bay, laurel of peace and love.
Laurus nobilis 'Bay Junior'

Polyhymnia

'Bay Junior' grows more slowly with a smaller leaf, but produces a very full, dense foliage. It's an ideal variety for more delicate topiary shape pruning. An elegant bay tree with the same qualities and characteristics as the Laurus nobilis.

Contemporary and timeless, shape pruning is still an essential part of everyone's garden. From Topiary to Bonsai, the 'Bay Junior' lends itself to many shapes.

Even if you let it grow freely, this plant will not disappoint you. This bay tree is a compact model and should a branch grow the wrong way, you can easily cut it away.

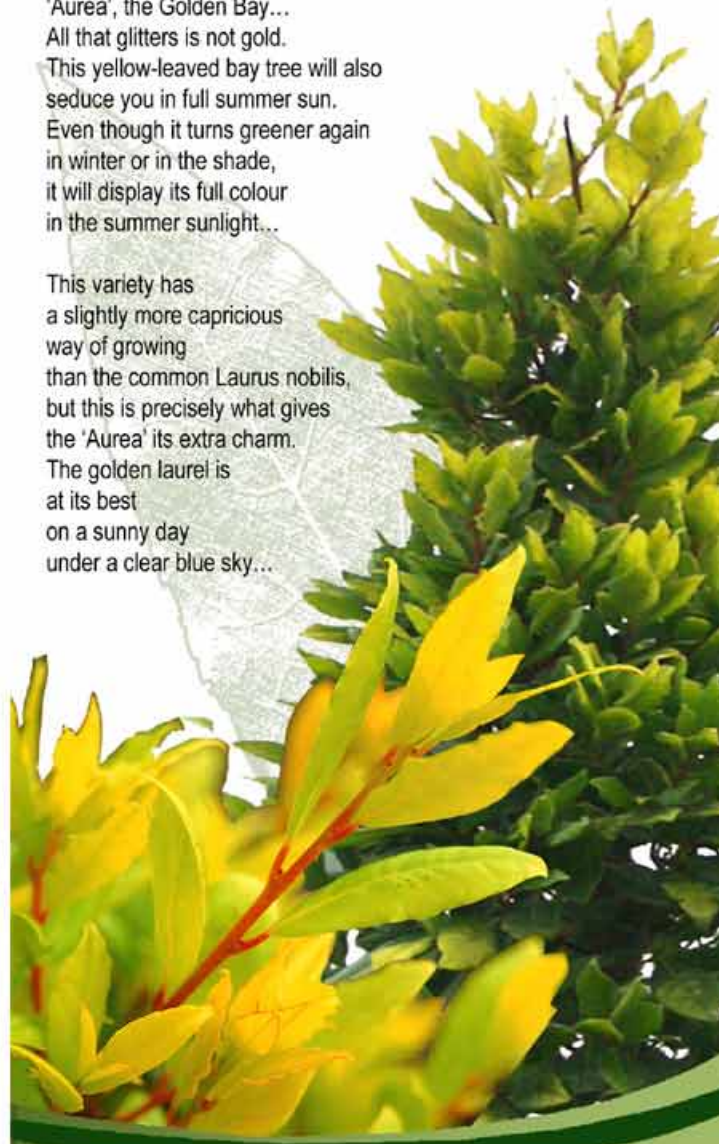

Urania

'Aurea', the Golden Bay... All that glitters is not gold. This yellow-leaved bay tree will also seduce you in full summer sun. Even though it turns greener again in winter or in the shade, it will display its full colour in the summer sunlight...

This variety has a slightly more capricious way of growing than the common Laurus nobilis, but this is precisely what gives the 'Aurea' its extra charm. The golden laurel is at its best on a sunny day under a clear blue sky...

Laurus nobilis 'Aurea'
Golden Bay, laurel of eternity and vigour.

Willow Bay, laurel of happiness and new life.
Laurus nobilis 'Angustifolia'

Thalia

Its small willow leaf and fresh light green colour make this bay tree just that bit more special. It looks delightful amongst pot and terrace plants.

This unusual variety keeps its leaves and its elegance throughout winter and summer, and thus earns its place among all the other plants.

'Angustifolia' is a very dense plant. Just like its big brother, the leaves are very suitable both in cuisine and in flower arrangements.

Laurus nob. 'Angustifolia' is a very robust plant that grows well both in sun and shade.
